chart - page 1		chart - page 2		chart - page 3		examples - page 4

**Buy-In points** - use chart page 1 - tournament buy-in amount determines base points to be multiplied by place finish points.

**Place Finish points** - use chart page 2 - number of players participating determines base points. Approximately 10% of the field will earn points. The points are inverted based on place finished, with 1st receiving the most points and the last paid player receiving the least.

**Final Table points** - use chart page 3 - Players will earn bonus points based on the place finished, the number of player participants and the buy-in amount.

**C.P.T. Points** - see examples page 4. Buy-In points X Place Finished points + Final Table Points = C.P.T. Points.

125 - 134	13	13	12	11	10	9	8	7	6	5	4	11th = 3 12th = 2 13th = 1

\*\*\* The number of places that earn points are determined by the number of players that play in the tournament.

Approximately 10% of the field will earn points. We round down from 4 players or less and round up from 5 players or more.

The Points are inverted from the place finished. Example. 100 players - 1st = 10pts, 2nd = 9pts, 3rd = 8pts & 8th = 3pts, 9th = 2pts, 10th = 1 pt.

The above example demonstrates a tournament field size up to 134, with an additional place earning points for every 10 players added.
